

# **METaverse TOKEN DEVELOPMENT**

# WHAT IS METaverse?

- "The Metaverse" is a concept that has captivated the world, fascinating some and perplexing others.
- Businesses have also reacted, with Disney, Tencent, and hundreds of others investigating the feasibility and utility of creating their own Metaverse.
- In contrast to the Metaverse, which is a shared virtual world owned by its users, the VR system and all of its associated content are owned by a company or brand.
- The Metaverse is the new marketplace, and businesses' virtual spaces are the new shops within it, opening up new marketing and sales channels.

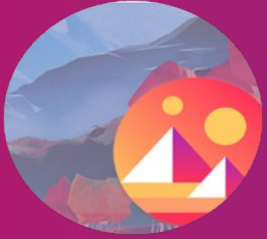

## METaverse TOKEN DEVELOPMENT

- Metaverse tokens are a type of currency that can be used to conduct transactions within the Metaverse.
- Some Metaverse tokens can only be spent within the Metaverse, while others can be purchased on exchanges like WarziX, Coinbase, and Binance.
- To authenticate asset ownership, such Metaverse tokens are created on a blockchain network.
- Metaverse token development plays an vital role for fiat currencies.
